Front-end · Python · HTML / CSS · JavaScript · Databases

AUTOMATION

n8n · AI Agents · Workflow Automation · API Integration

LANGUAGES

- Arabic — NATIVE
- French — FLUENT
- English — FLUENT

INTERESTS

Software Development · AI Agents · Automation · Interface Design

PROFILE

Business administration undergraduate at Tunis Business School who builds the whole product, not just the pitch: interface design in **Figma** and **Framer**, front-end development, **database-backed dashboards** and **n8n automations**. Has built two booking platforms for small businesses — each wired into **Google Calendar** — from first wireframe to working build.

SELECTED PROJECTS

01 Barber Booking Platform

PERSONAL PROJECT

A booking site for a barber shop: clients pick a service and a time slot, the appointment lands in the shop's Google Calendar automatically, and the owner runs the day from a dashboard.

- Built the customer booking flow — service selection, live availability and confirmation.
- Designed and built an owner dashboard for appointments, services and daily schedule.
- Connected the Google Calendar API so every confirmed booking creates the calendar event.
- Modelled services, time slots and bookings in a relational database.

FIGMA · FRONT-END · PYTHON · DATABASE · CALENDAR API

02 Solar Panel Service Platform

PERSONAL PROJECT

A service-booking platform for a solar panel contractor covering installation, maintenance and repair — requests, scheduling and a dashboard the team runs the jobs from.

- Modelled three distinct service types: installation, maintenance and repair.
- Built the request-to-booking flow with scheduling and a team-facing dashboard.
- Integrated Google Calendar so scheduled jobs sync straight to the technicians' calendars.
- Designed the interface in Figma before building it out.

FIGMA · FRONT-END · PYTHON · DATABASE · CALENDAR API

EDUCATION

BSc Business Administration

2026 — Present

Tunis Business School · Tunis, Tunisia

First-year undergraduate, studying business fundamentals while self-teaching product design and development — the combination behind both projects above.
